

WORK EXPERIENCE

- **Haven Technologies**

Fullstack Software Engineer

New York, NY

June 2022 - August 2023

- Redesigned and rebuilt an insurance policy viewer into a scalable SaaS product using Angular, PostgreSQL, Node.js, and Express, with test coverage via Mocha, Chai, and Sinon.
- Implemented NgRx for state management and centralized API call patterns, improving consistency and debuggability across the frontend codebase.
- Led weekly sprint planning and reviews, coordinating delivery timelines and priorities across cross-functional teams.
- Collaborated on new features from requirements through deployment, contributing to UX design, effort estimation, and implementation.

- **Allvue Systems**

Application Engineer, Operations

New York, NY

July 2020 - May 2022

- Resolved TSQL, XML, and XSLT errors in custom portfolio management software, improving reliability for B2B clients.
- Wrote scripts to fix trade data and payment processing inconsistencies, ensuring accuracy in compliance assessments.
- Built Salesforce search tooling with Python to streamline internal ticket prioritization workflows.

PROJECTS

- **No Plastic, No Problem.** — noplasticnoproblem.com

2023–Present

Next.js, React, TypeScript, Tailwind, Sanity CMS, n8n, Claude API, PostHog, Sentry, Supabase, Vercel

Production affiliate content platform in the sustainability space, serving 10,000+ monthly users with 50+ brand partnerships across the plastic-free consumer goods market.

- Built and operate a production affiliate platform serving 10,000+ monthly users, with a custom TypeScript/Sanity pipeline managing 200+ content entities and a bidirectional Notion integration powering the full editorial workflow.
- Built an end-to-end content automation pipeline using n8n, DataForSEO, and the Claude API, cutting SEO brief generation from hours of manual research to fully automated output and supporting a 3x increase in content throughput.
- Reduced CDN request volume by 85% and eliminated compute cost spikes by migrating to webhook-driven ISR revalidation, with automated search index regeneration triggered on every content publish.
- Raised mobile PageSpeed scores from the mid-50s to the mid-80s by resolving LCP and CLS issues, including image optimization, lazy loading, and layout stability fixes across the site.
- Instrumented PostHog across the affiliate funnel to track click-through behavior and conversion patterns, informing content placement and brand partnership decisions.
- Built a keyword ranking tracker in Supabase backed by DataForSEO, surfacing historical position trends and cannibalization signals to guide content prioritization and gap strategy.
- Built a custom MCP server connecting Sanity and Notion as a live knowledge graph, giving AI workflows real-time access to article inventory and brand relationships for fully grounded content generation.

EDUCATION

- **Stevens Institute of Technology**

Bachelor of Science in Computer Science

Hoboken, NJ

September 2016 - May 2020

TECHNICAL SKILLS

Programming

TypeScript, JavaScript, HTML/CSS, Python3, Java, SQL

Frameworks & Libs.

Angular, React, Redux, Next.js, NgRx, RxJS, Express, Node.js, Tailwind CSS

Tools

VSCode, Git, GitHub, Vercel, Sanity, n8n, Sentry, PostHog, Vitest, Docker, Postman, Jira, AWS

Databases

MongoDB, PostgreSQL, Supabase, Oracle, MySQL
